

***P. falciparum* sample data for Miotto, Amato *et al.*, *Genetic architecture of artemisinin-resistant Plasmodium falciparum*, Nature Genetics, 2015.**

**Terms and conditions of use**

This document lists ENA accession numbers of sequence read data, country of origin, and name and contact of contributing investigators for the samples included in Miotto, Amato *et al.*, *Genetic architecture of artemisinin-resistant Plasmodium falciparum*, Nature Genetics, 2015 (doi:10.1038/ng.3189).

Users are asked to note that these sequencing data were generated by the Wellcome Trust Sanger Institute to investigate a number of scientific questions that go beyond the scope of this particular publication. These intended scientific analyses, which are summarized below, are collectively referred to here as the Project and the data are referred to as the Project Data.

Some of the intended scientific analyses will be published through the MalariaGEN *Plasmodium falciparum* Community Project (<http://www.malariagen.net/projects/parasite/pf>) which includes all of the samples and data listed here, and other intended analyses will be published through the Pf3k Project which includes a large subset of the samples and data (<http://www.malariagen.net/projects/parasite/pf3k>). Also, many of the investigators and groups who contributed samples used in this publication have planned independent analyses of their datasets that have not yet been completed or reported.

The contributing investigators and data producers have agreed to release the sequence data and country of origin of these samples in the expectation that other researchers will find this useful and will respect the principles of the Fort Lauderdale Agreement ([www.genome.gov/Pages/Research/WellcomeReport0303.pdf](http://www.genome.gov/Pages/Research/WellcomeReport0303.pdf)) by allowing the Project and its contributing investigators to make the first presentations and publications reporting on their intended scientific analyses. The terms for data use are set out below, and are based on those established by the human 1000 Genomes Project ([www.1000genomes.org](http://www.1000genomes.org)). Usage of any data contained in this document implies your acceptance of these terms and conditions.

**== Use of the data, presentations and publications, and authorship ==**

**\* Global analyses of Project Data**

The Project and its contributing investigators plan to publish global analyses of: sequence data and quality; SNPs; other structural variants including short tandem repeats and copy number variations; haplotypes and LD patterns; population genetic phenomena such as population comparisons, mutation and recombination rates, signals of selection and demographic analyses; functional annotations; and analyses of regions of general interest such as *var* genes and genes implicated in drug resistance. Since the data is derived from blood samples of infected individuals in a natural setting, some samples will include mixed infections of *P. falciparum* with other Plasmodium species, and this will form part of the Project analysis.

Talks, posters, and papers on all such analyses are to be published first by approved presenters on behalf of the Project. When these planned analyses have been published by the Project, then other researchers

are free to present and publish using the Project Data.

Groups within the Project may make presentations and publish papers on more extensive analyses of specific topics coincident with the main Project analysis presentations and publications.

**\*Local analyses of the Project Data**

In many cases contributing investigators intend to perform analyses beyond those described above using the genomic data from their samples. External researchers who wish to investigate patterns of variation at particular study sites are respectfully asked to contact the relevant contributing groups to discuss their intentions and, if appropriate, to identify opportunities for collaboration. This should be done via the contacts named in the accompanying list of studies and samples.

**\* Methods development using the Project Data**

Researchers who have used small amounts of the Project Data (<= one chromosome) may present methods development posters, talks, and papers that include these data prior to the main Project publications, without needing Project approval or authorship. The Project should be acknowledged and cited using the format given below. Methods presentations or papers on global analyses or analyses using large amounts of Data would be similar to large-scale analyses of Data: researchers within the Project may make presentations or submit papers at the same time as the main Project presentations and papers, and others could do so after the Project publishes on the global analyses.

**\*Candidate region studies using the Project Data**

Researchers may present and publish on use of Project Data in specific chromosome regions (that are not of general interest) or as summaries (such as the total number of variants) without Project approval, prior to the main Project publications. The Project should be acknowledged and cited using the format given below.

**\* Population comparisons using the Project Data**

Researchers may use Project Data as controls or additional information for comparisons with their samples from other populations, prior to the main Project publications, as long as the analyses that the Project plans to do are not included. The Project should be acknowledged and cited using the format given below.

**\* Acknowledging and citing the source of the Project Data**

Publications using the Project Data should acknowledge and cite the source of the data using the following format: "This publication uses data generated by the Wellcome Trust Sanger Institute as part of the MalariaGEN *Plasmodium falciparum* Community Project and the Pf3k Project, as described in Miotto, Amato *et al*, Nature Genetics, 2015 (doi:10.1038/ng.3189)."

**\* Uses of the data to study other organisms**

The sequence read data may only be used for Plasmodium genome analysis. It is prohibited to attempt to recover information about humans or other organisms.

### **== Queries ==**

Researchers who have questions about whether they may make presentations or submit papers using project data may contact Vikki Cornelius ([vikki@well.ox.ac.uk](mailto:vikki@well.ox.ac.uk)) or Olivo Miotto ([olivo@tropmedres.ac](mailto:olivo@tropmedres.ac)).

### **== Project Updates ==**

The MalariaGEN *Plasmodium falciparum* Community Project and the Pf3k Project are active research collaborations. For the latest information on Project developments, analyses and publications, visit the Project pages at [www.malariagen.net/projects/parasite/pf](http://www.malariagen.net/projects/parasite/pf) and [www.malariagen.net/projects/parasite/pf3k](http://www.malariagen.net/projects/parasite/pf3k).

## **The data**

The following tables provide provenance metadata for the 1,612 samples used in Miotto, Amato *et al.*, Nature Genetics, 2015 (DOI: doi:10.1038/ng.3189).

Table 1 gives information about partner studies that contributed samples to this dataset. The columns show: (1) the identifier of the partner study; (2) the name and affiliation; and (3) the email address of the contact person who represents the group who conducted the partner study.

Table 2 gives information about 1,063 samples that were used in the artemisinin resistance GWAS, while Table 3 shows information about the remaining 549 samples used in other analyses in this study. In these tables, the columns show: (1) sample number; (2) the accession number(s) for the sequencing reads data relevant to the sample, stored at the European Nucleotide Archive (ENA); (3) the country of origin of the sample; (4) the identifier of the partner study that contributed the sample.

Read sequences can be downloaded from <http://www.ebi.ac.uk/ena/data/search/?query=plasmodium> using the accession numbers provided. Some samples have multiple accession numbers, each referring to a dataset generated by a separate sequencing experiment on the sample.

**Table 1 – Partner studies that contributed samples used in this study**
